

# Simulation Software

prepared by

Wm. J. Garland, Professor Emeritus

McMaster University, Hamilton, Ontario, Canada

## 1 Introduction

Major endeavours such as a CANDU nuclear power plant involves extensive engineering calculations usually performed using large simulation tools. However, to aid in conceptual BOE (back of envelope) evaluations and for education and training exercises, simplified and focused calculations are often done. To aid students and working professional alike, a few such small tools (primarily spreadsheets) are linked below.

Go to the Collections area of CANTEACH to see the full list.
