McMaster University, Hamilton, Ontario, Canada

[More about this document](#)

***Summary:***

*Here is a collection of various miscellaneous bits of mathematics that you need to know for nuclear engineering but may have forgotten.*

## **Table of Contents**

1	Introduction.....	2
1.1	Overview.....	2
1.2	Learning Outcomes.....	2
2	Linear Algebra .....	2
2.1	Determinants .....	2
3	Solutions to Partial Differential Equations .....	3
3.1	Bessel Functions .....	3

## **List of Figures**

**ERROR! NO TABLE OF FIGURES ENTRIES FOUND.**

## 1 Introduction

### 1.1 Overview

Excuse the mess, this paper is under construction.

### 1.2 Learning Outcomes

The goal of this chapter is for the student to understand:

- The basic mathematical tools needed for nuclear engineering.

## 2 Linear Algebra

### 2.1 Determinants

$$\left. \begin{array}{l} ax + by = 0 \\ cx + dy = 0 \end{array} \right\} \Rightarrow \underline{\underline{A}} \underline{x} = 0 \quad (3.1)$$

therefore

$$y = -\frac{cx}{d} \quad (3.2)$$

$$\therefore ax - b\frac{cx}{d} = 0 \quad (3.3)$$

$$\therefore dax - bcx = 0 \quad (3.4)$$

$$\therefore (da - bc)x = 0 \quad (3.5)$$

$$\therefore da - dc = 0 \text{ if there is to be a solution where } x \neq 0. \quad (3.6)$$

We can generalize this:

$$\begin{aligned} \text{determinant of } A &= \det(\underline{\underline{A}}) = \left| \begin{array}{cc} a & b \\ c & d \end{array} \right| = 0 \text{ for } x \neq 0 \\ &= ad - bc \text{ in the above particular case.} \end{aligned} \quad (3.7)$$

### 3 Solutions to Partial Differential Equations

#### 3.1 Bessel Functions

$J$  = Bessel function of the first kind (3.8)

$Y$  = Neuman =  $N_v(x)$

= Bessel function of the second kind (3.9)

$$= \frac{\cos(v\pi)J_v(x) - J_{-v}(x)}{\sin(vx)}$$

---
